

Take a deep breath

To protect the health of operators, Weller introduces the Zero-Smog 4V (was the WFE 2S), the small fume extraction unit with BIG advantages.

Always fresh air

A visual filter monitoring system (red/yellow/green) together with an audible alarm signal gives early warning of the filter condition, guaranteeing optimum performance.

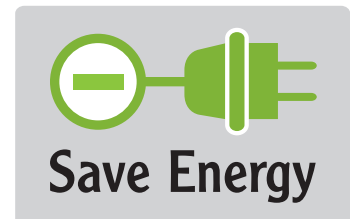

The new pressure control system ensures that a constant air flow is maintained at each extraction arm regardless of the number of arms in operation. The motor speed is adjusted automatically so that energy is saved, noise level is reduced and filter life is prolonged.

For 4 workplaces

The Zero-Smog 4V has connection points for 4 arms and is fitted with one Easy-Click connection. If more connections are required these can be bought separately. The new Easy-Click system is designed for many different configurations.

New optimized pressure control. This feature guarantees a constant air flow at every extraction arm, no matter how many arms are connected. The blower speed is adjusted automatically. This saves energy, reduces the noise level and enlarges the filter life time.

More advantages

- Control parameters can be loaded via a USB flash drive
- Backlight digital display
- Ease of navigation with a multilingual menu
- Castors give ease of movement

Digital display

The backlighting graphic display with an easy navigation thanks to a multilingual menu.

Practical wheels

Thanks to the 4 wheels, the new Zero-Smog 4V is mobile and can be easily placed to different workplaces.
